Figure 3.

![Graph showing prevalence of multimorbidity in women with different levels of Ultra Low Fertility (ULF). The graph indicates different risk ratios (RR) for multimorbidity based on the number of ULF levels.

- RR: 2.6 (1.6 - 4.1) for women with 4-5 ULF levels.
- RR: 1.9 (1.2 - 2.9) for women with 3 ULF levels.
- RR: 1.7 (1.1 - 2.6) for women with 2 ULF levels.
- RR: 1.7 (1.1 - 2.6) for women with 0-1 ULF levels.

Legend:
- 4 - 5 ULF
- 3 ULF
- 2 ULF
- 0 - 1 ULF

The y-axis represents the prevalence of multimorbidity in percentage, while the x-axis shows the number of ULF levels.
