The diagram shows the percentage distribution of different types of Head and Neck Carcinoma (HNC) across NPC, CL, and HPC categories. The y-axis represents the percentage (%) while the x-axis denotes the type of HNC, namely NPC, CL, and HPC.

- **NPC**:
  - SCC: Approximately 50%
  - Undifferentiated LE: Approximately 30%

- **CL**:
  - SCC: Approximately 80%
  - Undifferentiated LE: Approximately 10%

- **HPC**:
  - SCC: Approximately 100%
  - Undifferentiated LE: Approximately 0%

The bar graphs indicate a significant dominance of SCC in the CL category and a nearly complete absence of Undifferentiated LE in the HPC category.
