Patients registered with 6 practices in Sandwell
Intervention group: 11,901 patients in four practices
Control group: 8,515 patients in two practices

Patients identified as probably at >20% ten-year CVD risk
Intervention group: 617 patients
Control group: 474 patients

High risk patients suitable to be invited for CVD risk factor assessment.
Intervention group: 598 patients
Control group: 463 patients

Intervention group
CVD risk factors assessed and ten-year CVD risk calculated:
N = 370 (61.9% of those invited)

Identified as eligible for:
Aspirin
N = 273 (45.7% of those invited)
Antihypertensive
N = 170 (28.4% of those invited)
Statin
N = 293 (49.0% of those invited)
At least one treatment
N = 297 (49.7% of those invited)

Prescribed:
Aspirin
N = 65 (10.9% of those invited)
Antihypertensive
N = 96 (16.1% of those invited)
Statin
N = 200 (33.4% of those invited)
At least one treatment
N = 243 (40.6% of those invited)

Control group
CVD risk factors assessed and ten-year CVD risk calculated:
N = 129 (27.9% of those invited)

Identified as eligible for:
Aspirin
N = 89 (19.2% of those invited)
Antihypertensive
N = 56 (12.5% of those invited)
Statin
N = 100 (21.6% of those invited)
At least one treatment
N = 100 (21.6% of those invited)

Prescribed:
Aspirin
N = 9 (1.9% of those invited)
Antihypertensive
N = 13 (2.8% of those invited)
Statin
N = 54 (11.7% of those invited)
At least one treatment
N = 59 (12.7% of those invited)

30 patients excluded
