The diagram shows the improvement of TD/foetal score (unit) for different treatments compared to the placebo. The treatments include Placebo, FDC 400/12 μg, FDC 400/6 μg, Aclidinium 400 μg, and Formoterol 12 μg. The MCID (Minimal Clinically Important Difference) is indicated as 1 unit. The following improvements are observed:

- Placebo: 1.2
- FDC 400/12 μg: 2.5
- FDC 400/6 μg: 2.4
- Aclidinium 400 μg: 2.1
- Formoterol 12 μg: 2.1

Significance levels are indicated as *** for p < 0.001.
