Figure. Change from baseline in IC during exercise at Week 3. Change from baseline in IC every 2 min during exercise (constant work rate cycle ergometry; ITT population).

Data reported as least squares means change from baseline (analysis of covariance) + standard error; *p<0.05, **p<0.01, ****p<0.0001 versus placebo.

BID, twice daily; IC, inspiratory capacity; ITT, intent-to-treat.
