A. PAR-2 Western blot analysis showing expression in L6 myoblasts and skeletal muscle. Arrow indicates 76 kDa band.

B. Immunohistochemical staining of skeletal muscle tissue showing PAR-2 localization.

C. High magnification image of PAR-2 staining, with numbered regions indicating specific areas of interest.

D. Lower magnification image of the same tissue section, correlating with regions labeled in C.

E. Confocal microscopy image of another tissue section, possibly demonstrating different cellular structures or features.
