The graphs represent the changes in ODI (Outcome of Disability Index) scores over time (in months) for women and men. The x-axis indicates the time points at 0, 3, and 12 months, while the y-axis shows the ODI scores ranging from 0 to 70. The data points and error bars suggest variability in ODI scores across different time intervals, with notable differences between sexes. The graphs also indicate that ODI scores may have increased or decreased over the 12-month period for both women and men.
