Refractory neurogenic lower urinary tract dysfunction

Inclusion criteria fulfilled → study inclusion after written informed consent

Bilateral tined lead implantation → SNM testing for 3-6 weeks → end of test phase:
- Bladder diary (3 days)
- Urinalysis, urodynamic investigation
- Qualiveen questionnaire
- Female Sexual Function Index / International Index of Erectile Function

SNM optimization phase (2 months) and randomization

SNM ON (2 months) → SNM OFF (2 months)

At the end of 2 months double-blind SNM phase:
- Bladder diary (3 days)
- Urinalysis, urodynamic investigation
- Qualiveen questionnaire
- Female Sexual Function Index / International Index of Erectile Function

Unblinding

SNM ON in all patients: study end
