Figure A: Comparison of BUN levels between GHRH-treated and control groups on day 0 and day 75. The figure shows a significant increase in BUN levels in the control group compared to the GHRH-treated group on day 75, with a sample size of 29 for the GHRH-treated group and 20 for the control group.

Figure B: Comparison of Creatinine levels between GHRH-treated and control groups on day 0 and day 75. The figure shows a slight increase in Creatinine levels in the control group compared to the GHRH-treated group on day 75, with a sample size of 30 for the GHRH-treated group and 20 for the control group.

Figure C: Comparison of BUN/creatinine ratio between GHRH-treated and control groups on day 0 and day 75. The figure shows a significant increase in the BUN/creatinine ratio in the control group compared to the GHRH-treated group on day 75, with a sample size of 29 for the GHRH-treated group and 19 for the control group.
