The graph shows the fluorometry counts (%) for different bacterial strains. The strains are labeled with their respective names:

- B. cereus-4342
- B. anthracis-Sterne
- B. cereus-11778
- B. thuringiensis
- B. cereus-10876

Each strain is represented by a different symbol. The x-axis labels are cut off and not fully visible, but appear to correspond to the bacterial strains.
