Fig. 4 Distribution of range sizes by species group

![Graph showing distribution of range sizes by species group. The x-axis represents range size in km², and the y-axis represents number of species. Each species group—amphibians, mammals, and birds—is represented by a different color: blue for amphibians, green for mammals, and red for birds. The bars are divided into categories of range size: <100, 500, 1,000, 5,000, 10,000, 25,000, 50,000, 75,000, 100,000, 150,000, 200,000, and >200,000 km². The graph illustrates that amphibians have the highest number of species in the smallest range size category, while birds have the highest number of species in the >200,000 km² category.](image-url)
