The figure shows bar graphs for four different samples: T152, T208, CT383, and CT448, along with CT802. Each graph represents the relative expression of genes A, B, and C under different conditions: 100% S. obliquus, 10% Mut, and 10% WT. The y-axis indicates the relative expression level, ranging from 0 to 10.
