Definite diagnosis of diabetes

HbA1c/laboratory glucose diagnostic of diabetes

11 White Caucasians aged 6 months to 35 years at diagnosis referred with 'remitting diabetes'

2 patients with no diagnostic evidence of diabetes

9 patients with diabetes mellitus

2 patients treated with oral hypoglycaemic agents from diagnosis

Diabetes initially severe
Treated with insulin

7 patients treated with insulin from diagnosis

4 patients off insulin for less than 4 years

Definite remission
4 years or more without insulin treatment and HbA1c in the normal range

3 patients with no relapse within 4 years

1 patient with BMI > 30kg/m²

Exclusion of other forms of remitting diabetes (Type 2)
BMI < 30kg/m² at diagnosis

2 patients with BMI < 30kg/m²

1 patient with steroid-induced hyperglycaemia

Exclusion of other forms of remitting diabetes (other)
Other forms of diabetes that can remit excluded

1 patient with idiopathic remitting diabetes
