Figure 1: Description of the content of the intervention and the control group.

**Screening**

**Information meeting with patient**

**Day 1: Randomization**

**Intervention group**

- Continuation of attachment to the healthcare system
- Day 1-3: The municipality is informed
- Day 2 or 3: Planning meeting with the patient (and participating caregiver)
- Day 4-5: Home conference
- Attachment of a SPT: Promoting quality of life and relieving the physical, mental, social and spiritual suffering
- Psychological intervention, beginning after home conference (min. 2 sessions)
- Psychological intervention in bereavement (1-2 sessions)

**Control group**

- Continuation of attachment to the healthcare system
- Referral to SPT, and/or psychologist if GP or oncologist consider this relevant

---

a) The randomization will take place then the informed consent is obtained and the baseline questionnaire is filled

b) The patient is referred to a SPT operating in the local area. If the SPT’s capacity is exhausted within the time limits of the protocol, another SPT will be involved according to an algorithm (unpublished).

SPT = specialized palliative care team
