The image shows a bar graph illustrating the percent with incident hip fracture across different alcohol preferences. The categories listed on the y-axis are: Past, Nondrinker, Current Wine, Infrequent Drinker, Current Mixed, Current Liquor, and Current Beer. The x-axis represents the percent with incident hip fracture, ranging from 0 to 1.6. The graph indicates that Current Liquor has the highest percent with incident hip fracture, followed by Nondrinker, Current Beer, and Past. Current Wine and Current Mixed have lower percentages, while Infrequent Drinker has the lowest percentage among the listed categories.
