Figure A: Graph showing the caspase activity over time with different treatments: Control, Caspase-9, Caspase-3, and Caspase-8. The y-axis represents caspase activity (% of control) and the x-axis represents time (h) and EVO-b (1.0 μg/mL).

Figure B: Bar graph showing the % of Caspase-8 activity with different treatments: Cont., z-EVD, z-LERD, z-DEV, and z-YAD. The inset image shows the Western blot analysis with bands for Pro-caspase-8 and Cleaved caspase-8.
