The graph shows the percentage enzyme leakage from different treatments compared to a negative control. The treatments include:

- Negative control
- Ethanol 5M
- A. ceylanica 400 μg/ml + Ethanol 5M
- A. ceylanica 1000 μg/ml + Ethanol 5M
- A. ceylanica 2000 μg/ml + Ethanol 5M

The graph indicates that the enzyme leakage is highest in Ethanol 5M and decreases with the addition of A. ceylanica at different concentrations. The asterisks in the graph indicate statistically significant differences compared to the control.
