Initial presentation
(October 2004)

1\textsuperscript{st} Intervention (Excision of thoracic mass)

\beta\textsuperscript{-}hCG=17.300\,mIU/ml
Thoracic X-ray: No findings
Testicular mass

2\textsuperscript{nd} Intervention (Left inguinal orchiectomy)

\beta\textsuperscript{-}hCG=93.400\,mIU/ml
Cervical mass at the area of 1\textsuperscript{st}
intervention
Thoracic X-ray: multiple metastatic nodules

4 cycles of BEP chemotherapy
(November-December 2004)

\beta\textsuperscript{-}hCG<0.2\,mIU/ml
Clinical complete remission
Thoracic X-ray: Necrotic post chemotherapy elements (confirmed by FNAB and PET scan)

Current situation
(September 2006)

Fig. 5: Schematic presentation of the diagnosis and treatment course, including \(\beta\text{-}hCG\) title and X-ray findings. FNAB: fine-needle aspiration biopsy.
