The pancreas is a gland organ in the digestive and endocrine system of vertebrates.

It is both an endocrine gland producing several important hormones, including insulin, glucagon, and somatostatin, and a digestive organ, secreting pancreatic juice containing digestive enzymes that assist the absorption of nutrients and the digestion in the small intestine.

What is pancreas?

What hormones are produced by the pancreas?

What kind of enzymes are produced in the pancreas?

What tasks have the enzymes produced in the pancreas?
