The following questionnaire is part of a research project that focuses on test preferences concerning colorectal (bowel) cancer screening. It will take about 20 minutes to complete the questionnaire. You will contribute to scientific knowledge, therefore your participation is valuable.

There will be 16 questions with different test scenarios. Each question shows three test scenarios from which you need to choose the test you prefer most. After you made a decision you can also choose not to be screened. Some graphical aids are used for clarification. Finally you will be asked a few personal questions.

Your participation is voluntarily. Your answers are entirely confidential and anonymous. With the presentation of the results only group results will be displayed, therefore individual data cannot be recognized.

The next question is important for your participation.

Do you have colorectal (bowel) cancer?

- Yes
- No
The following is an example of a test scenario.
The following is an example of a question. Please note that you have to make two decisions.

Imagine that you can choose how you will be screened for colorectal cancer. Please look at the screening tests below and select the test you prefer by clicking the button below this test.

How do you need to prepare?  
- No preparation required.
- Before the test you need to take enemas which cause diarrhea to empty your colon.
- For 3 days you need to alter your diet and medication. Before the test you need to take laxatives which cause diarrhea to empty your colon.

How is the test done?  
- For 2 consecutive days you need to take samples of your stool with applicator sticks that are included in the test package and return them to your doctor. This test is done at home.
- A short flexible tube with a small camera is inserted through the anus into the last part of the colon. This test is done at a hospital.
- A long flexible tube with a small camera is inserted through the anus into the full colon. During the examination you will be sedated. This test is done at a hospital.

How many out of 10 people with cancer, would the test correctly identify?  
- 10 out of 10
- 5 out of 10
- 3 out of 10

How many out of 10 people without cancer, would the test correctly identify?  
- 9 out of 10
- 7 out of 10
- 5 out of 10

How many out of 10,000 people who take this test have a complication?  
- 1 out of 10,000
- 10 out of 10,000
- 100 out of 10,000

How often do you need to take the test?  
- Every 10 years
- Every 5 years
- Every 2 years

If you could choose between the test you chose or not to be screened for colorectal cancer, what would you prefer?  
- I would still prefer the test I chose above.
- I would prefer not to be screened.

The questionnaire starts hereafter!
Imagine that you can choose how you will be screened for colorectal cancer. Please look at the screening tests below and select the test you prefer by clicking the button below this test.

| How do you need to prepare? | Before the test you need to take laxatives which cause diarrhoea to empty your colon. | For 3 days you need to alter your diet and medication. Before the test you need to take laxatives which cause diarrhoea to empty your colon. | No preparation required. |
| How is the test done? | For 2 consecutive days you need to take samples of your stool with applicator sticks that are included in the test package and return them to your doctor. This test is done at home. | A short flexible tube with a small camera is inserted through the anus into the last part of the colon. This test is done at a hospital. | A long flexible tube with a small camera is inserted through the anus into the full colon. During the examination you will be sedated. This test is done at a hospital. |
| How many out of 10 people with cancer, would the test correctly identify? | 10 out of 10 | 8 out of 10 | 9 out of 10 |
| How many out of 10 people without cancer, would the test correctly identify? | 7 out of 10 | 9 out of 10 | 10 out of 10 |
| How many out of 10,000 people who take this test have a complication? | 1 out of 10,000 | None | 100 out of 10,000 |
| How often do you need to take the test? | Every 10 years | Every year | Every 2 years |

If you could choose between the test you chose or not to be screened for colorectal cancer, what would you prefer?

- I would still prefer the test I chose above
- I would prefer not to be screened
Imagine that you can choose how you will be screened for colorectal cancer. Please look at the screening tests below and select the test you prefer by clicking the button below this test.

How do you need to prepare?
- No preparation required.
- Before the test you need to take enemas which cause diarrhoea to empty your colon.
- Before the test you need to take laxatives which cause diarrhoea to empty your colon.

Before the test you need to take a pill that leaves your body through faeces after several hours. Your test results are wirelessly sent to your physician. This test is done at home.

A long flexible tube with a small camera is inserted through the anus into the full colon. During the examination you will be sedated. This test is done at a hospital.

How many out of 10 people with cancer, would the test correctly identify?
- 8 out of 10
- 7 out of 10
- 9 out of 10

How many out of 10 people without cancer, would the test correctly identify?
- 8 out of 10
- 9 out of 10
- 8 out of 10

How many out of 10,000 people who take this test have a complication?
- 1 out of 10,000
- 10 out of 10,000
- None

How often do you need to take the test?
- Every year
- Every 5 years
- Every 10 years

If you could choose between the test you chose or not to be screened for colorectal cancer, what would you prefer?
- I would still prefer the test I chose above
- I would prefer not to be screened
Imagine that you can choose how you will be screened for colorectal cancer. Please look at the screening tests below and select the test you prefer by clicking the button below this test.
