Figure 1: Burden of GI, respiratory and dermal symptoms in the community among the study participants

The results are presented as frequencies per 100 person-years, with the 95% confidence intervals shown in brackets.

**GI Symptoms**
- Average no. of hospitalizations: 2.1 (1.1, 3.1)
- Average no. of doctor visits: 26 (20, 31)
- Average no. of days unable to carry out normal duties: 137 (118, 155)
- Average no. of days another family member took time off work to care for sick person: 54 (42, 65)
- Average no. of weeks with GI symptoms: 121 (104, 139)

**Respiratory Symptoms**
- Average no. of hospitalizations: 2.0 (1.3)
- Average no. of doctor visits: 48 (40, 56)
- Average no. of days unable to carry out normal duties: 198 (173, 223)
- Average no. of days another family member took time off work to care for sick person: 63 (48, 77)
- Average no. of weeks with respiratory symptoms: 492 (439, 545)

**Dermal Symptoms**
- Average no. of hospitalizations: 0.2 (0.1, 0.5)
- Average no. of doctor visits: 19 (13, 25)
- Average no. of days unable to carry out normal duties: 21 (12, 29)
- Average no. of days another family member took time off work to care for sick person: 8 (3, 12)
- Average no. of weeks with dermal symptoms: 122 (92, 153)
