The diagram illustrates the relative preference weights for various scenarios, measured on a scale from -1.2 to 1.2. The weights are differentiated by line styles and colors for two groups: The Public, Scenario A (black line, red dots) and Patients, Scenario A (red line, black dots). The x-axis represents different test scenarios, including Sensitivity, Specificity, SE Mild, SE Mod, SE Severe, LSE 5%, LSE 50%, LSE 95%, TA 2 days, TA 7 days, TA 12 days, Mouth Swab, Blood Sample, Tumor Biopsy, Bone Marrow Biopsy, Liver Biopsy, No Test, and Cost. The y-axis represents the relative preference weight.
