Cumulative % of women ranked by family income

(a)

Cumulative % of delivery at county or higher level health facility

(b)
Figure 1. Concentration curves for selected indicators of health service use among Chinese women. The x-axis represents the cumulative % of related variables, and the y-axes represent the proportions of (a) delivery at a healthcare facility (county-level), (b) home delivery, (c) antenatal care 12 weeks before birth, and (d) antenatal care ≥5 times and postnatal visits ≥3 times.
