Condition 1:
High risk for CHD events
N = 6,615; prevalence = 49%

Condition 2:
Very high risk for CHD events
N = 6,615; prevalence = 14%

Condition 3:
Framingham risk score >20%
N = 3,720; prevalence = 9%

Condition 4:
LDL cholesterol ≥100 mg/dL
N = 1,583; prevalence = 30%

Condition 5:
LDL cholesterol ≥70 mg/dL
N = 1,583; prevalence = 80%

Predicted probability threshold for 90% specificity
