Figure 2. Validation of patient questionnaires against GP records

- Analysis of the first recorded symptoms in 74 consultations from 51 patients
  - 37 consultations where an exact date of GP consultation was provided by the participant
  - 15 where there was evidence in the GP records of a consultation on this date
  - 17 where there was evidence in the GP records of a consultation within the prescribed time window
  - 5 where there was no evidence in the records of a consultation
  - 23 where there was evidence in the GP records of a consultation within the prescribed time window
  - 14 where there was no evidence in the GP records of a consultation within the prescribed time window
