The graph shows the age-adjusted survivor functions for different quintiles over time. The x-axis represents the follow-up time in years, ranging from 1 to 10. The y-axis represents the survivor function values, ranging from 0.86 to 1.0. Each quintile is represented by a different line color and pattern, with Quintile 1 in blue, Quintile 2 in red, Quintile 3 in green, Quintile 4 in orange, and Quintile 5 in gray. The survival rate decreases over time for all quintiles, with Quintile 1 showing the highest survival rate at all times and Quintile 5 showing the lowest survival rate.
