The graph shows the AI (%) for metformine and placebo groups at baseline, 4 months, and 12 months.

- At baseline, the AI (%) for metformine is higher than placebo.
- At 4 months, the difference between the two groups is smaller compared to baseline.
- At 12 months, the difference is significant, with p-values of 0.021 and 0.038 for metformine and placebo, respectively.

The graph indicates that metformine had a significant effect on AI (%) over the 12-month period compared to placebo.
