Fig. 14. 24-bit fluorescence (A) and 8-bit gray-tone (B) images of small neoplastic lymphocyte (CanLy_n1.tif). Subtracted 65 to remove background pixels; added 37 to set highest reference pixel point to 100 as shown by the point of arrow in panel B corresponding to the value 100 in the adjoining Table. The mountain-like curve has an extended shoulder at its left side. Note 9 spikes are mostly located at the broad-based peak of the curve, while minute spikes project from its shoulder.
