Fig. 21. 24-bit fluorescence (A) and 8-bit gray-tone (B) images of large neoplastic lymphocyte (CanLyn10.tif). Subtracted 50 to remove background pixels; added 24 to set highest reference pixel point to 100 as shown by the point of arrow in panel B corresponding to the value 100 in the adjoining Table. The curve is fairly similar to that in Fig. 20, except for more pronounced spikes at the left shoulder of the latter; the outline of the shoulder is sigmoid-like.
