A survival graph showing the effect of anti-HMGB1 mAb, control IgG, and PBS on survival percentage over time post PbA infection (days).

B a PE (%) graph comparing anti-HMGB1 Ab and control IgG.

C- H further analyses showing the levels of various cytokines, including TNF, IFN-γ, IL-10, IL-12, MCP-1, and IFN-γ by ELISA, with naive, isotype IgG, and aHMGB1 groups.

Graphs indicate statistical significance marked with asterisks (*) and non-significance marked with 'ns'.
