Malaria risk should influence the use of an ITN/LLIN: prevalence elastic behavior.

This efficiency of ITN/LLINs to reduce malaria prevalence is established.

Poverty is certainly influencing ITN/LLIN use through costs or opportunity costs. ITN could have an indirect effect on poverty through (2) and (4).

The relationship between malaria and poverty is certainly bidirectional.

(1) Malaria risk should influence the use of an ITN/LLIN: prevalence elastic behavior.
(2) The efficiency of ITN/LLINs to reduce malaria prevalence is established.
(3) Poverty is certainly influencing ITN/LLIN use through costs or opportunity costs. ITN could have an indirect effect on poverty through (2) and (4).
(4) & (5) The relationship between malaria and poverty is certainly bidirectional.
