Fig. S6 Effect of Adenosine periodate (AdOx) on intracellular growth of *P.falciparum*. Graph shows the IC\textsubscript{50} curve of the AdOx treated parasites. Histogram represents the average mean of triplicates of parasite count. Bottom panel shows the morphology of control and AdOx treated (10 mm) 3D7 parasites after 48 hours.

IC\textsubscript{50} (3D7) = 6.961 µM
IC\textsubscript{50} (DD2) = 41.78 µM
