Levels of AOPP (µmol/L)

![Graph A]

Levels of AOPP (µmol/L) over different time points for Group A and Group B. Bars represent standard errors of the mean.

![Graph B]

Principal component scores for PCA1 and PCA2.

- PCA1: Group A (P<0.0001), Group B (P>0.05)
- PCA2: Group A, Group B

Twenty-year-old rats were divided into two groups: Group A and Group B. The levels of AOPP (µmol/L) were measured at 2.5, 5.5, 10.5, 15, and 24 months. The principal component analysis (PCA) was performed on the data to identify patterns and differences between the groups.
