Figure 3: Appropriate Treatment Card Game

Legend: Rules of the game (3 - 5 players)

Step 1. Deal 3 cards per person, and place the remaining in a pile face down

Step 2. The first player picks up one card from the pile and then determines if he can give “appropriate treatment” using the correct combination of 3 cards (Fever & RDT positive & ACT Or Fever & RDT negative & further Investigation)
If he/she can, the player places the 3 cards on the table. If not, his/her turn ends.

Step 3. Play passes to the next player, and follows from step 2.

Step 4. Play continues until someone has given appropriate treatment to five patients

Fever = Patient has a fever
RDT+ = Rapid diagnostic test is positive
RDT- = Rapid diagnostic test is negative
ACT = Artemisinin based combination therapy
Examen Complementaire = Further Investigation
