Figure 2. Mean peripheral parasitaemia in the first 24 h in children with increased parasitaemia during the first hours of treatment and in those who showed no increase in peripheral asexual.

AL1: children who did not have initial increase in peripheral parasitaemia after treatment with artemether-lumefantrine

AL2: children who had an increase in peripheral parasitaemia in the first few hours after commencing treatment with artemether-lumefantrine

AA1: children who did not have initial increase in peripheral parasitaemia after treatment with Artesunate-amodiaquine

AA2: children who had an increase in peripheral parasitaemia in the first few hours after commencing treatment with Artesunate-amodiaquine.
