The figure shows a comparison of TTR levels (cruiser/basal) across different genotypes and treatment groups. The TTR levels are depicted for GSTM1+ and GSTM1-Null genotypes.

- For GSTM1+, the TTR levels are compared among different treatment groups (EAT (1X Crucif), 2EAT (1X Crucif), 2EAT (2X Crucif)).
- For GSTM1-Null, the TTR levels are also compared among different treatment groups.

Significant differences are indicated by p-values:
- Between GSTM1+ and GSTM1-Null: p = 0.03
- Between GSTM1+ and GSTM1-Null: p < 0.001
