Figure 2 Bland-Altman plot comparing vitamin B\textsubscript{12} intake estimated from the two-time DHQ.

DHQ: self-administered diet history questionnaire. Difference between vitamin B\textsubscript{12} intakes estimated from the two-time DHQ for each person (y-axis) is plotted against the mean vitamin B\textsubscript{12} intake averaged from the two-time DHQ (x-axis). The mean difference and the upper and lower 95\% limits of agreement are shown by dotted lines.
