Figure 3. Comparison of calibrations (severity scores) of child items in the Isfahan Food Security Survey versus the U.S. Current Population Survey Food Security Supplement.

- Child did not eat whole day
- Child skipped meal
- Child hungry
- Cut size of child’s meal
- Child not eating enough
- Could not afford nutritious meal
- Few kinds of food

Item calibration (severity), U.S. CPS
- Item calibration (severity), Isfahan
- Equal score

The graph shows the comparison of item calibrations between the Isfahan Food Security Survey and the U.S. Current Population Survey Food Security Supplement. Each point represents a specific child item, and the severity scores are plotted on the y-axis for Isfahan and the x-axis for the U.S. CPS.
