Figure 4. Tissue mineral density (TMD) analysis were performed using SPSS13.0. These analysis came respectively from the data of different cancellous bone model samples scanned by micro-CT after being stimulated for 14 days and 21 days. In group 1000 με and 2000 με for 21 days group, the TMD had a change compared to the control group. (* P<0.05 vs. the control group)
