Forward MEG: RDM and MAG boxplots obtained on 100 random sphere models (y1 and 3-layers) using non-radial magnetometers.

Figure 6: Accuracy comparison for MEG using random meshes with fixed number of vertices and each layer contains 600 or 800 random vertices.

(a) RDM 600 points per interface
(b) MAG 600 points per interface
(c) RDM 800 points per interface
(d) MAG 800 points per interface
