Figure 2: PFGE Analysis. Figure 2a. PFGE analysis of the seven CTXM-15 *K. pneumoniae* producers strains. The dendrogram was constructed with dice coefficient, complete linkage, and 1.5% position tolerance. The degree of relatedness between *K. pneumoniae* isolates and those from GenBank is shown on the branches. Figure 2b. PFGE analysis of the 11 *K. pneumoniae* strains producing SHV-12, SHV5 and SHV-2a. The dendrogram was constructed with dice coefficient, complete linkage, and 1.5% position tolerance. The degree of relatedness among *K. pneumoniae* isolates and those from GenBank is shown on the branches.
