(A) Heatmap showing miRNA expression levels in different clusters of melanocytes and melanoma cell lines.

(B) Bar charts illustrating fold change in expression of specific miRNAs (Mir-145, Mir-99a, let-7C, Mir-370, Mir-127) compared with normal human epidermal melanocytes (NHEM).

(C) Schematic representation of paternally (Pat) and maternally (Mat) expressed miRNAs (mir-127, mir-370, mir-376a, mir-376c) in different clusters.

(D) Graphs depicting fold change in expression of mir-127, mir-370, mir-376a, and mir-376c in NHEM, NEV, and MEL cell lines compared with NHEM.
