[Figure] a) Viable cells (%) vs. pIC (ng/mL) for SKRC-1 and SKRC-44 cells.

b) Microscope images of SKRC-1 and SKRC-44 cells under different conditions: Untreated, pIC added, and pIC-TF reagent.

c) Flow cytometry plots showing Annexin V-FITC and PI staining for SKRC-1 and SKRC-44 cells under untreated, pIC added, and pIC-TF reagent conditions.
