A

![Graph showing the percentage of proliferating cells for Teff and Treg with different concentrations of nilotinib. The graph shows that Teff and Treg together at a 1:1 ratio have a higher percentage of proliferating cells compared to individual Teff or Treg at various concentrations.](image)

B

![Graph showing the percentage of proliferating cells for Teff and Treg with different concentrations of nilotinib. The graph indicates that the concentrations of nilotinib do not significantly affect the percentage of proliferating cells, as indicated by P > .05.](image)
