The graph shows the levels of IL-2 (pg/ug protein^-1) in EDL and Soleus muscles across different conditions labeled as Control, E0, E2, and E6. In the E0 condition, there is a significant increase in IL-2 levels compared to the Control and E2 conditions, as indicated by the asterisk. The hash symbol (*) indicates a significant difference between the EDL and Soleus muscles in the E0 condition. The error bars represent the standard deviation.
