A. Graph showing the number of migrating cells per mm² for different concentrations of PGE₁ (µM). The graph indicates a significant increase in cell migration with an increase in PGE₁ concentration.

B. Images showing control and PGE₁ 10 µM-treated cellular structures. The images show a comparison of cell density and morphology between the two conditions.

C. Graph depicting the number of migrating cells per x100 field for different concentrations of PGE₁ (µM). The graph shows a significant increase in cell migration with PGE₁ treatment.

D. Images of control and PGE₁ 10 µM-treated cells. The images illustrate the changes in cell morphology and density due to PGE₁ treatment.
