Cell proliferation (% of control group) vs EPA concentration (µM) for RWPE-1 and PC-3 cell lines.

- **RWPE-1**: The graph shows a decrease in cell proliferation with increasing EPA concentration for all time points (24h, 48h, 72h).
- **PC-3**: The graph also shows a decrease in cell proliferation with increasing EPA concentration, with a slight variation between time points.

The x-axis represents the EPA concentration (µM), ranging from 25 to 175. The y-axis represents cell proliferation (% of control group), ranging from 0 to 1.5 for RWPE-1 and 0 to 1.2 for PC-3.
