(A) Mean LDL particle size (nm)

- Control (n = 21)
- Fenofibrate (n = 22)

Baseline: 25.5 ± 2.5 nm
Follow-up: 26.0 ± 3.0 nm

(B) Change of mean LDL particle size (nm)

- Control
- Fenofibrate

$r = -0.47$, $P = 0.02$

$P < 0.001$

Change of CET activity (pmol/μL/h)

- Control
- Fenofibrate

$r = -0.34$, $P = 0.02$
