The figure shows a Western blot analysis of Mi2α (upper band) and Lamin A/C expression levels in WT, PI3Kγ−/−, and PI3Kδ D810/A910 mice under different conditions:

- **Smoke**: -  (+) +
- **Budesonide**: -  -  +  +

The bar graph below quantitatively represents the lung Mi2α expression (% Sham Exposed) for each group:

- **WT**: 100%
- **PI3Kγ−/−**: 60%  
- **PI3Kδ D810/A910**: 50%

The graph indicates significant differences (*) and highly significant differences (***).
