Inhibition of cell associated (H9 cells) HIV_{IIIb} virus infection by HIV-1 gp120 Antiserum (PB1) and Silver Nanoparticles

![Graph showing inhibition of cell associated HIV infection by gp120 Antiserum (PB1) and Silver Nanoparticles. The x-axis represents antibody dilution, and the y-axis represents % infectivity of cell associated HIV infection. The graph shows a comparison between gp120 Antiserum (PB1), gp120 Antiserum (PB1) + AgNP, and AgNP (1mg/ml).]
